

CREATE YOUR OWN CIRCULAR ECONOMY WITH

XSILIO

REUSE. REPURPOSE. REALLOCATE.

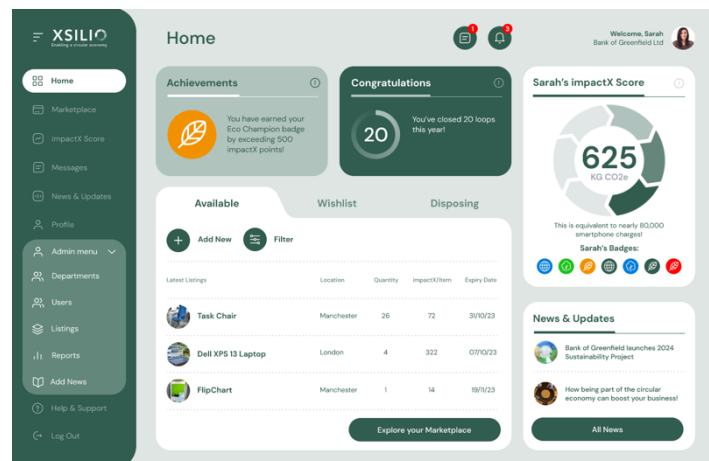

Your sustainability platform.

Introducing XSILIO, the sustainability platform that helps organizations put circular economy into action. Our team of data analytics and AI experts have created a solution that enables your organisation to unlock the value of unused assets, reducing waste and mitigating your carbon impact. With impactX scoring, measuring your ESG success has never been easier so you can continue in substantial strides towards environmental responsibility.

The XSILIO platform brings together the users and potential users from across the organisation so that on an easy to use system, in real-time, they can collaborate to repurpose assets.

Our exclusive scoring system harnesses the power of data analytics, employing statistical and link analysis to assign a unique impactX score to every asset and listing on our platform. By analysing our extensive asset

library, impactX algorithms calculate a precise carbon footprint score for each item, presented in kilograms of CO2 equivalent. This revolutionary feature provides organizations with invaluable insights into the environmental impact of their assets, facilitating informed and sustainable decision-making.

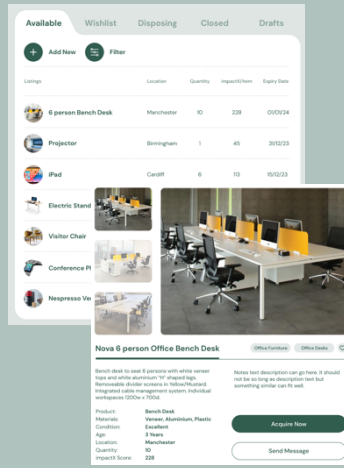

Data driven ESG insights.

While many organizations address sustainability challenges, XSILIO stands out by prioritising data utilisation in tackling carbon impact mitigation. The platform's unique approach ensures meaningful engagement and effective measurement of carbon impact, setting it apart in the sustainability landscape.

Organisations face growing demands to transparently communicate their Environmental, Social, and Governance (ESG) initiatives to stakeholders. This includes shareholders, employees, potential hires, and clients, all of whom are keenly interested in understanding efforts to reduce carbon footprints and contribute to environmental sustainability.

Marketplace

The platform's marketplace allows users to list and acquire assets, fostering reuse and preventing unnecessary landfill waste.

The user-friendly interface ensures seamless engagement, while intelligent algorithms underpin the entire process.

XSILIO goes beyond internal reuse by offering an option to 'expand the circle.' Assets not reused internally can be shared with an affiliate network, extending the environmental impact mitigation beyond organizational boundaries.

Sarah's impactX Score

This is equivalent to nearly 80,000 smartphone charges!

Sarah's Badges:

Earn Points!

You can earn 2280 impactX points by acquiring the assets in this listing!

+2280

That's the equivalent of cutting your mileage by nearly 6000 miles or 99 bags of rubbish being recycled instead of landfilled!

XSILIO motivates users through impactX scoring, fostering habit-forming behaviours to encourage a sustainability mindset.

Users receive badges and equivalent metrics, making the carbon impact tangible and encouraging continuous engagement.

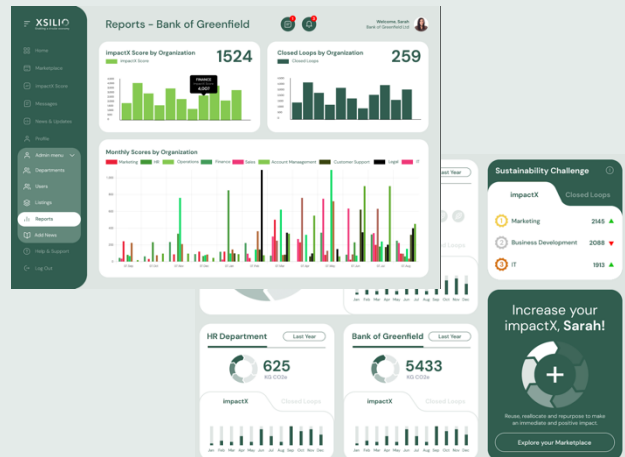

A user-centric design fosters a sense of shared environmental responsibility,

Motivate

Measure

The platform enables real-time measurement and reporting of sustainability metrics.

Through impactX scores and closed-loop data, organizations gain valuable insights into eco-efficiency and footprint mitigation in KG CO2e, reduce operational costs, and showcase their commitment to a greener future.

XSILIO

Enabling a circular economy

XSILIO transcends traditional sustainability efforts by placing data at the forefront of asset reuse. By quantifying environmental impact, organizations not only contribute to a sustainable future but also enhance their brand reputation and position themselves as leaders in responsible, eco-conscious business practices.

Join XSILIO in the journey towards a greener, more sustainable future.
